Subject: Agency selection for national bilingual survey - LeanIX evaluation and recommendation

Purpose

This memo seeks approval to select a research agency for a national bilingual online survey (target $n \approx 1,200$ Canadian adults, ~12-minute questionnaire, English & French). The selected agency will support baseline measurement of awareness and attitudes toward X to inform 2027 communications and policy decisions.

Evaluation approach

We used a LeanIX-style vendor evaluation matrix to compare three Canadian research agencies against four criteria aligned with project needs;

- Cost efficiency – pricing model, estimated cost per complete, flexibility
- Sample quality – panel source, QA/fraud controls, weighting, mode options
- Turnaround speed – time to quote, launch, field, and topline/report
- Canadian panel coverage – national reach, bilingual capacity, specialized panels

Each criterion was scored 1 (Poor) to 5 (Excellent) and assigned an urgency (weight) of 1–5 based on project priorities. Weighted scores = Grade $\times$ Urgency.

Recommendation

Select Leger as the primary research partner for this project.

Rationale

- Best overall fit for national bilingual surveys: Leger's proprietary LEO panel (>400k Canadians) is purpose-built for large, bilingual, national studies and is routinely used for federal/provincial public-opinion tracking.

- Highest scores on critical criteria: Leger leads on sample quality and turnaround speed, which we weighted as “critical” (urgency = 5). This reduces methodological and schedule risk for a high-visibility study.
- Full-service capability without over-engineering: Compared with Environics’ heavier consulting orientation, Leger offers end-to-end survey design, field, and analysis appropriate for our current scope, while still ensuring rigorous QA and weighting.

Note: Canadian Viewpoint is a strong, cost-efficient alternative if we later move to a “fieldwork-only” model with a fixed questionnaire. Environics is preferable for more complex policy or segmentation work beyond a standard survey.

Appendix

Table: LeanIX evaluation matrix

Criteria	Canadian Viewpoint Grade	Leger Grade	Environics Grade	Urgency (1-5)	Weighted CVI	Weighted Leger	Weighted Environics
Cost efficiency	4	3	3	4	16	12	12
Sample quality	4	5	5	5	20	25	25
Turnaround speed	4	5	4	5	20	25	20
Canadian panel coverage	4	5	5	4	16	20	20
Total weighted score					72	82	77
